SCHEDULE 3
PRESCRIBED INFORMATION

SCHEDULE 4
DEPOSIT REPLACEMENT SCHEDULE

Information for tenants leaflet - Custodial

A tenant's guide to mydeposits

i The Housing Act 2004 covers all deposits taken on Assured Periodic Tenancy (APT) in England and Occupation Contracts in Wales as of the 1st December 2022, under the Renting Home (Wales) Act 2016. All landlords who take a deposit from their tenant must comply with the tenancy deposit protection legislation by:

1

Protecting the deposit with a government-authorised tenancy deposit protection scheme within 30 days of receiving it from the tenant and,

2

Providing the tenant with proof of the deposit protection (known as the Prescribed Information) within the same 30 day timeframe.

The legislation has been designed to protect your deposit and ensure that if entitled, you get it back.

Note: In this leaflet where it says landlord it will also mean agent if the agent has taken and protected the deposit. In Wales a tenancy is now named an 'Occupation contract'.

Penalties for landlords who fail to comply

You can take your landlord to court if they fail to comply with the legislation. They may face the following penalties:

- » Be required to return the deposit to you or lodge the full deposit with a custodial scheme within 14 days
- » Be fined between one and three times the deposit amount
- » Be unable to serve a Section 8 notice to regain possession of their property in most circumstances

About mydeposits Custodial

mydeposits provides a Custodial tenancy deposit protection scheme. Landlords can join the scheme and lodge your deposit for it to be protected. Both parties can then communicate with the scheme at the end of the tenancy to arrange for it to be released. We offer a free and impartial resolution management service if you cannot agree how much of the deposit is to be returned to you.

Your landlord protects the deposit with us

Landlord

Your landlord is provided with the prescribed information certificate

Tenant

A signed copy of the certificate, along with this leaflet is given to you as proof of protection

What is the Prescribed Information?

By law, your landlord must provide you with key information about your deposit, how it is protected with an authorised scheme and what to do if you have a disagreement about the return of the deposit at the end of your tenancy. Your landlord must provide you with a document which provides the key information. This Prescribed Information document must be signed by your landlord and you should check that the information is correct. This information for tenants leaflet also forms part of the Prescribed Information and explains how our scheme works.

End of the tenancy - How to get your deposit back

At the end of the tenancy either you or your landlord can request the deposit to be released using the online portal. Both you and your landlord should negotiate the return of the deposit less any settlements that are agreed between you using the negotiation portal.

Once we have received agreement from both parties the scheme has five working days to release your money. If either party is uncontactable at the end of the tenancy and fails to respond to a release request within 14 days of it being sent, the other party can release the deposit using the 'single release process' on the portal. More information about releasing deposits can be found on our website at www.mydeposits.co.uk/

Disagreements over settlement requests

If you have a disagreement over the return of the deposit or about proposed settlements by your landlord, you can negotiate this with your landlord by proposing an alternative settlement and can include supporting evidence. However, if an agreement cannot be reached either party can escalate the release request to our resolution team and we will release any deposit money that is not associated with a settlement request.. Either way, you must respond to the release request within 14 days or your landlord can release their proportion of the deposit using the 'single release process'. More information about releasing deposits can be found on our website at www.mydeposits.co.uk/

Escalating release requests

If you need to escalate a release request with the scheme over proposed settlements you can do this during the negotiation stage of a release request. The scheme cannot deal with disagreements between you and your landlord during the duration of the tenancy. The mydeposits resolution management service is designed to resolve your deposit disagreements without having to go to court by offering complimentary alternative dispute resolution services. You and your landlord must both agree to its use and agree to abide with any decision made by the scheme.

Our resolution management service is evidence based and requires you and your landlord to provide evidence to justify your position. The scheme will not require you to attend a meeting or to discuss your case in person. An impartial adjudicator will review the evidence provided and make a binding decision. The scheme will then distribute the deposit money in accordance with the decision. More information on raising disputes, escalating release requests and the type of evidence that adjudicators require can be found on our website at www.mydeposits.co.uk/

Note: At the end of your tenancy, please ensure the scheme has updated contact details for you. Please note that you are able to amend your contact details via your online account.

Is your deposit protected?

You can check the tenant section of our website to find out if your deposit is protected.

NOTES FOR RECIPIENT

THIS CONDITION REPORT IS AN IMPORTANT AND VALUABLE DOCUMENT WHICH SHOULD BE RETAINED FOR FUTURE USE

The purpose of a domestic periodic inspection is to determine, so far as is reasonably practicable, whether the electrical installation of a single dwelling (house or flat) is in a satisfactory condition for continued service. This report provides an assessment of the condition of the electrical installation identified overleaf at the time it was inspected and tested, taking into account the stated extent of the installation and the limitations of the inspection and testing.

The report identifies any damage, deterioration, defects and/or conditions found by the inspector which may give rise to danger (see PART 6), together with any items for which improvement is recommended.

If you were the person ordering this report, but not the user of the installation, you should pass this report, or a full copy of it including these notes, the schedules and additional pages (if any), immediately to the user.

This report should be retained in a safe place and shown to any person inspecting or undertaking further work on the electrical installation in the future. If you later vacate the property, this report will provide the new user with an assessment of the condition of the electrical installation at the time the periodic inspection was carried out.

Where the installation incorporates a residual current device (RCD) there should be a notice at or near the device stating that it should be tested every six months. For safety reasons it is important that this instruction is followed.

For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person or persons, competent in such work. The recommended date by which the next inspection should be carried out is stated in PART 5 of this report. There should also be a notice at or near the main switchboard or consumer unit indicating when the next inspection of the installation is due. NICEIC* recommends that you engage the services of an NICEIC Approved Contractor for the inspection.

This report has been issued in accordance with the national standard for the safety of electrical installations, *BS 7671: 2018 – Requirements for Electrical Installations*.

Only an NICEIC Approved Contractor or Conforming Body is authorised to issue this NICEIC Domestic Electrical Installation Condition Report. You should have received the report marked 'Original' and the Approved Contractor should have retained the report marked 'Duplicate'.

This report form is intended to be issued only for the purpose of reporting on the condition of an existing electrical installation and must not be issued to certify new electrical installation work including the replacement of a consumer unit.

The report consists of at least six numbered pages. Additional numbered pages may have been provided to permit further relevant information relating to the installation to be recorded. For installations having more than one consumer unit or more circuits than can be recorded in PART 12, one or more additional *Schedules of Circuit Details and Test Results* should form part of the report. The report is invalid if any of the schedules identified in PART 10 are missing. The report has a printed serial number, which is traceable to the Contractor to which it was supplied.

PART 7 (Details and limitations) should identify fully the extent of the installation covered by this report and any limitations on the inspection and testing. The inspector should have agreed these aspects with the person ordering the report before the inspection was carried out.

Rarely, an operational limitation may have been encountered during the inspection such as inability to gain access to parts of the installation or to an item of equipment. The inspector should have noted any such limitations in PART 7. It should be noted that the greater the limitations applying to a report, the less its value from the safety aspect.

A declaration should have been given by the inspector in PART 4 of the report. The declaration must reflect the statement given in PART 3, which summarises the observations and recommendations made in PART 6. Where one or more observations have been made in PART 6, the Classification code given to each by the inspector indicates the degree of urgency with which remedial action needs to be taken to restore the installation to a safe working condition.

Where the inspector has indicated an observation as code C1 (danger present) **the safety of those using the installation is at risk**. Wherever practicable, items classified as (C1) should be made safe on discovery, and it is recommended that a skilled person(s) competent in electrical installation work undertakes the necessary remedial work immediately.

Where the inspector has indicated an observation as code C2 (potentially dangerous) **the safety of those using the installation may be at risk**, and it is recommended that a skilled person competent in electrical installation work undertakes the necessary remedial work as a matter of urgency.

Where the inspector has indicated that an item requires further investigation (FI), the investigation should be carried out without delay to determine whether danger or potential danger exists. For further guidance on the Classification codes, please see the reverse of page 2.

Where the installation can be supplied by more than one source, such as the public supply and a standby generator or microgenerator, this should be identified in PART 8 *Supply Characteristics and Earthing Arrangements*, and the *Schedules of Circuit Details and Test Results* (PART 12) compiled accordingly.

Where inadequacies in the intake equipment have been observed (Item 1 of PART 10), the person ordering the inspection should inform the distributor and/or supplier as appropriate.

Should the person ordering this report have reason to believe that it does not reasonably reflect the condition of the electrical installation reported on, that person should in the first instance raise the specific concerns in writing with the Approved Contractor. If the concerns remain unresolved, the person ordering this report may make a formal complaint to NICEIC, for which purpose a complaint form is available on request.

The complaints procedure offered by NICEIC is subject to certain terms and conditions, full details of which are available upon application. NICEIC does not investigate complaints relating to the operational performance of electrical installations (such as lighting levels), or to contractual or commercial issues (such as time or cost).

** NICEIC is operated by Certsure LLP, a partnership between the Electrical Contractors' Association and the charity, Electrical Safety First. NICEIC maintains and publishes registers of electrical contractors that it has assessed against particular scheme requirements (including the technical standard of electrical work).*

GUIDANCE FOR RECIPIENTS ON THE CLASSIFICATION CODES

Only one Classification code should be given for each recorded Observation

Classification code C1 (Danger present)

Where an observation has been given a Classification code C1, the safety of those using the installation is at risk and immediate remedial action is required.

The person ordering the inspection is advised to take action without delay to remedy the observed deficiency in the installation, or to take other appropriate action (such as switching off and isolating the affected part(s) of the installation) to remove the danger. The NICEIC Approved Contractor issuing this report will be able to provide further advice.

NICEIC makes available 'Electrical Danger Notification' forms to enable inspectors to record, and then to communicate to the person ordering the report, any dangerous condition discovered.

Classification code C2 (Potentially dangerous)

Classification code C2 indicates that, whilst those using the installation may not be at immediate risk, urgent remedial action is required to remove potential danger. The NICEIC Approved Contractor issuing this report will be able to provide further advice.

It is important to note that the recommendation given at PART 5 of this report (Next Inspection) for the maximum interval until the next inspection is conditional upon all items which have been given a Classification code C1 and code C2 being remedied immediately and as a matter of urgency, respectively.

It would not be reasonable for the inspector to indicate that the installation is in a satisfactory condition if any observation in this report has been given a code C1 or code C2 classification.

Classification code C3 (Improvement recommended)

Where an observation has been given a Classification code C3, the inspection and/or testing has revealed a non-compliance with the current safety standard which, whilst not presenting immediate or potential danger, would result in a significant safety improvement if remedied. Careful consideration should be given to the safety benefits of improving these aspects of the installation. The NICEIC Approved Contractor issuing this report will be able to provide further advice.

Code FI (Further investigation required without delay)

It should usually be possible for the inspector to attribute a Classification code to each observation without indicating a need for further investigation.

However, where 'FI' has been entered against an observation the inspector considers that further investigation of that observation is likely to reveal danger or potential danger that, due to the agreed extent or limitations of the inspection and/or testing, could not be fully identified at the time.

It would not be appropriate for the inspector to indicate that the installation is in a satisfactory condition if there is reasonable doubt as to whether danger or potential danger exists. Consequently, where the inspector has indicated 'Further investigation required without delay' (FI) the overall assessment of the installation (PART 3) should be marked as 'Unsatisfactory'.

If the inspector has indicated that an observation requires further investigation without delay, the person ordering this report is advised to arrange for the NICEIC Approved Contractor issuing the report (or another skilled person or persons competent in such work) to undertake further examination of that aspect of the installation as a matter of urgency, to determine whether or not danger or potential danger exists.
